

Zero Defect Glass Fusion technology

Long lived and durable – a reputation that can only be gained by a dedication to the highest quality and commitment to ZERO DEFECT glass fusion. A philosophy enshrined in our procedures and our culture at Europe's largest dedicated Glass-Fused-to-Steel tank manufacturing facility.

All of Permastore's Glass-Fused-to-Steel is manufactured under strict ISO 9001 procedures which exceed the requirements of international

Enameling standards. All industrial grade finishes are subject to 100% inspection of the contact face and all sheets which fail inspection are

rejected. We mean what we say: "ZERO DEFECT GLASS FUSION".

From sheet steel preparation through glassing to packing and shipping over 16 inspections ensure that quality is continuously delivered.

Many steel finishes may look good, but don't be fooled. With Glass-Fused-to-Steel beauty really isn't only skin deep. Just take a look and the bonding achieved between glass and steel; no paint or epoxy finish can compete with this. Glass-Fused-to-Steel offers a lifetime's protection; you'll never need to recoat or repaint again. That's why detailed specification and quality control is so important. Without it you are buying on looks alone.

The FUSION Family of Glasses – Unrivalled Storage Solutions

With over 35 years' experience and commitment to fundamental materials research and development, Permastore draws upon a knowledge base unrivalled in our industry. We aim to optimize the cost of tank ownership by offering a choice of glass your application, ensuring minimum capital costs and virtually eliminating maintenance costs.

Ecofusion®, ISOfusion®, Trifusion® and trifusion® Plus provide cost effective storage solutions in applications from storage of agricultural manure to very demanding industrial effluents. The panel below explains our process.
